

GMZBST CADENCE · API & PLATFORM OVERVIEW

The engagement engine behind digital experiences.

Cadence turns a stream of behaviour into engagement: a live score, motivation archetypes, XP and levels, missions, rewards, tournaments and quizzes. One engine, any brand, API-first.

HOW IT WORKS

Turn behaviour into engagement.

Every digital experience emits signals. Cadence reads those signals, computes engagement server-side, and returns the loops that keep people coming back. You send events; you get insight and mechanics.

EVENTS IN

What people do

- A game finished, a quiz answered, a reward earned
- One simple event contract across every experience
- Value-bearing events can be cryptographically signed

THE CADENCE ENGINE

What it computes

- A 0 to 100 engagement score across nine behaviour dimensions
- A motivation archetype for every user
- XP, levels, missions and streaks, tamper-proof

OUTCOMES OUT

What it returns

- Rewards, tournaments, clans and leaderboards
- Next-best-action, personalised per user
- Retention, cohort and activity insight

Server-side and tamper-proof

Any

Brand, on your own domain

The result is an engagement layer that is measurable, not guesswork: you can see who is engaged, why, and what will keep them participating, then act on it automatically.

One engine. Every mechanic.

Each capability stands alone or combines with the others. Use one, or the whole engine, behind a fully branded experience.

■ Engagement scoring & archetypes

A live 0 to 100 score across nine behaviour dimensions, plus a motivation archetype (Competitor, Socialiser, Achiever and more) for every user.

■ XP, levels & progression

A unified XP ledger with levels and streaks, awarded server-side. Points rules turn any event into XP, flat or per unit, configured per client with no code.

■ Missions & next-best-action

Rule-based or AI-recommended missions that move users from passive to active, timed to intent.

■ Rewards & redemption

Connect XP to vouchers, airtime, data, points or partner benefits, with stock, limits and guarded redemption.

■ Tournaments, clashes & clans

Single and double-elimination brackets, score contests and team play, with automated scheduling.

■ Prize campaigns (play-to-win)

Instant-win or score-tiered prize pools with entry limits, claim and decline flows and second-chance chaining. Server-authoritative and auditable.

■ Quizzes, surveys & polls

Scored quizzes plus sentiment surveys with Likert, rating and NPS scales, authored by hand or generated by AI, and embeddable as a branded widget.

■ Bring-your-own-key AI

AI authoring and recommendations run on the client's own key, so cost and control stay with them.

■ Analytics that matter

Engagement, retention, weekly cohorts, per-campaign results (entries, win and claim rates) and a live activity feed, per brand and per experience.

BUILT FOR DEVELOPERS

Integrate in a few lines.

REST API + OpenAPI

A documented JSON API with an interactive in-browser explorer.

Official JavaScript & PHP SDKs

Dependency-free clients so integration is a few lines, not a project.

Signed webhooks

Real-time events, HMAC-signed so you can verify every delivery.

Self-serve portal

Manage API keys, watch usage and read webhook delivery logs.

Embeddable widget

Drop a branded quiz, survey or poll onto any page with one iframe, no build.

White-label & multi-tenant

Your domain, colours and content, isolated per brand.

Higher retention

Daily missions, achievements and return loops.

More participation

Quizzes, games and challenges across channels.

Deeper loyalty

XP, rewards and branded progression.

BUILT FOR BUSINESS OUTCOMES, ACROSS EVERY SECTOR
